Assignment Project Exam Help Instruct entation https://eduassistpro.github.io/

Add WeChat edu_assist_pro

Review (1/2)

- Logical and Shift Instructions
 - Operate on bits individually, unlike arithmetic, which operate on entire word
 Use to isolate fields, either by masking or by shifting back and forth

 - Shift left logical (sll) https://eduassistpro.github.io/
 - Shift right arithmetic () divides by close but strange round red own eghtat edu_assist_pro (e.g., $-5 \text{ sra } 2 \text{ bits} = -2 \text{ while } -5 / 2^2 = -5 / 4 = -1$)
- New Instructions: and andi or ori nor sll srl sra

Review (2/2)

- MIPS Signed versus Unsigned is an "overloaded" term
 - Do/Don't sign extend signment Project Exam Help (lb, lbu)
 Dan't average here. Assignment Project Exam Help (lb, lbu)
 - Don't overflow (addu, addiu, subu) Add WeChat edu_assist_pro
 - Compute the correct answer (multu, d
 - Do signed/unsigned compare (slt,slti/sltu,sltiu)

MULT vs MULTU

- In 2s complement, addition and subtraction are the same, as is the case in the low-half of a multiply.

 A full multiply, however, is not! Project Exam Help
- In 32-bit twos-comple https://eduassistpro.githpleix/ntation as the unsigned quantity 2^{32} 1. However:
 Add WeChat edu_assist_pro (-1)(-1) = +1 $(2^{32} 1)(2^{32} 1) = 2^{64} 2^{33} + 1$

Overview

- Big idea: stored program

- MIPS instruction form https://eduassistpro.githubsier instructions

Add WeChat edu_assist_pro

Big Idea: Stored-Program Concept

- Computers built on 2 key principles:
 - 1) Instructions are represented as numbers.
 - 2) Therefor A strigging project be read or writte .
- Simplifies SW/ https://eduassistpro.github.io/
 - Memory technology words edu_assistprograms

Consequence #1: Everything Addressed

- Since all instructions and data are stored in memory as numbers, everything has a memory address
 Instruction words and saignment Project Exam Help

 - Both branches and jump https://eduassistpro.github.io/ to anything in memory
- C pointers are just mem

- Unconstrained use of address was Chartedu_assist_pro
- Up to you in MIPS; up to you in C; limits in Java
- One register keeps address of instruction being executed: "Program Counter" (PC)
 - Just a pointer to memory: Intel calls it Instruction Address Pointer, a better name

Consequence #2: Binary Compatibility

- Programs are distributed in binary form
 - Programs bound to specific instruction set
 Assignment Project Exam Help
 Different version for Macintosh and IBM PC
- New machines want t https://eduassistpro.githurbeid/) as well as programs compiled to new instructi Add WeChat edu_assist_pro
- Leads to instruction set evolving ov
- Intel 8086 was selected in 1981 for 1st IBM PC
 - Latest PCs still use 80x86 instruction set...
 - Can (more or less) still run program from 1981 PC today!

Instructions as Numbers (1/2)

- All data we work with is in words (32-bit blocks):

 - Each register is a word.
 Assignment Project Exam. Help
 1w and sw both access memory one word at a time
- So how do we represe https://eduassistpro.github.io/
 - Remember: Computer only understan Add WeChat edu_assist_pro
 "add \$t0,\$0,\$0" is meaningless

 - MIPS wants simplicity:
 - Since data is in words, let the instructions be words too

Instructions as Numbers (2/2)

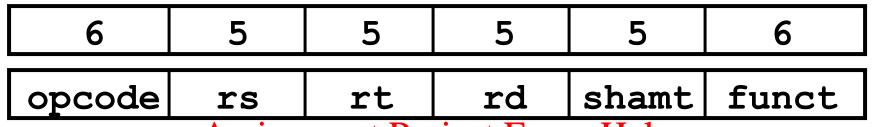

- Divide the 32-bit instruction word into "fields"
- Each field tells something about the instruction lp
- We could define differ ruction, but MIPS is based on simplicity, so https://eduassistpro.githybrioction formats:
 - R-format
 Add WeChat edu_assist_pro
 - I-format
 - J-format (next lecture)

Instruction Formats

- I-format: used for instructions with immediates,

 - lw and sw (since the offset counts as an immediate),
 Assignment Project Exam Help
 beq and bne (branches use offsets as we will see later)
 - But not the shift instruhttps://eduassistpro.github.io/
- J-format: jump format used for j an Add WeChat edu_assist_pro
- R-format: used for all other instructi
 - R stands for register format
- It will soon become clear why the instructions have been partitioned in this way!

R-Format Instructions (1/5)

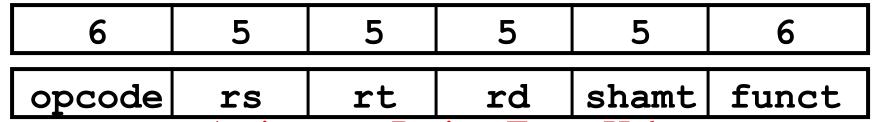

- Break 32 bit Assignment Project Exam Help fields
 - For simplicithttps://eduassistpro.github.io/
- Important: On these slides edu_assist provided is viewed as a 5 or 6 bit unsig r, not as part of a 32 bit integer

5 bit fields can represent any number 0-31,

6 bit fields can represent any number 0-63.

R-Format Instructions (2/5)

• What do thes ell us?

opcode partihttps://eduassistpro.gitloubt.io/

Note: This number is equal to 0 at instructions. **funct** combined with **opco** at instructions. **funct** combined with **opco** ber exactly specifies the instruction

- Question:
 - Why aren't opcode and funct a single 12-bit field?
 - Think about it... We'll see the answer this later.

R-Format Instructions (3/5)

Assignment Project Exam Help

More fields

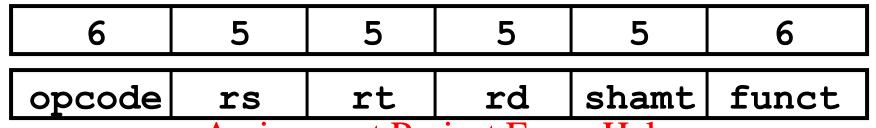

```
containing first operand

(Target Register): generali edu_assist_pro
ecity register
```

containing second operand (note that name is misleading)

<u>rd</u> (Destination Register): *generally* used to specify register which will receive **result of computation**

R-Format Instructions (4/5)

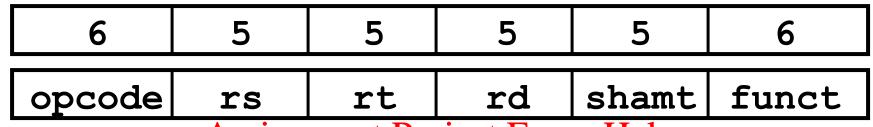

Assignment Project Exam Help
 Notes about r

- Each register https://eduassistpro.github.io/
- It can specify any unsigned in range 0-31
 It specifies one of the 32 region
- "generally" on previous slide because there are exceptions that we'll discuss more later...

mult and div have nothing important in the rd field since the dest registers are hi and lo mfhi and mflo have nothing important in the rs and rt fields since the source is determined by the instruction

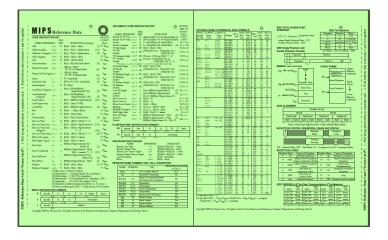

R-Format Instructions (5/5)

• One more fie Assignment Project Exam Help cussed

Shifting a 32-bit word by more less, so this field is only 5 bits (solidan Westernatt edu_assistation)

- This field is set to 0 in all but the shift instructions
- For a detailed description of field usage for each instruction, see green reference card in the textbook

R-Format Example (1/2)

 MIPS Instruction: \$8 \$9 \$10 Assignment Project Exam Help add opcode = 0 (look up in tabl https://eduassistpro.github.io/ funct = 32 (look up in table) Add WeChat edu_assist_pro **rs** = 9 (first operand) rt = 10 (second *operand*) **rd** = 8 (destination) shamt = 0 (not a shift)

R-Format Example (2/2)

MIPS Instruction:

```
add $8 $9 $10

COMP273 McGill

19

I-Format Instructions (1/5)

- What about instructions with immediates?
 - 5-bit field only represents numbers up to the value 31
 Immediates may be much larger than this

 - Ideally, MIPS would ha https://eduassistpro.giffat/simplicity)
 - Unfortunately, we need to compromis
- Define new instruction format parti edu_assist_pro ent with R-format
 - Note that if the instruction has an immediate, then it uses at most 2 registers

I-Format Instructions (2/5)

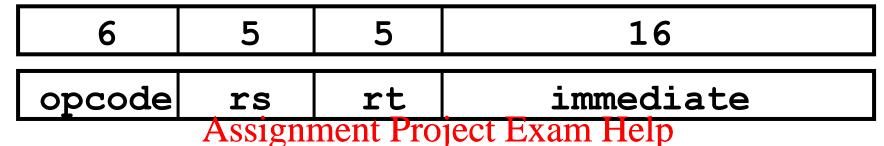

- Define "fields bits each 6 + 5 + 5 + 16 https://eduassistpro.github.io/
- Again, each field that a Charmedu_assist_pro
- Key Concept: Only one field is inconsistent with Rformat. Most importantly, opcode is still in same location.

I-Format Instructions (3/5)

- What do thes
- opcode: sahttps://eduassistpro.githubcie/field,
 opcode uniquely specifies n in I-format
 Add WeChat edu_assist_pro
 This finally answers the qu hy
- This finally answers the qu
 R-format has two 6-bit fields to identify instruction instead of a single 12-bit field...
 - In order to be consistent with other formats

I-Format Instructions (4/5)

• More fields:

```
rs specifies t https://eduassistpro.githwhido one)

rt specifies the register whic edu_assist pro computation (this is why it's get register "rt")
```

I-Format Instructions (5/5)

- The Immedia
 - addi, slt https://eduassistpro.github.ie/tended to 32 bits. Thus, it's treate integer.

 • 16 bits → can be used to re integer.

 • 16 bits → can be used to re edu_assist_pro eduate up to 2¹⁶
 - different values
 - This is large enough to handle the offset in a typical 1w or sw, plus a vast majority of values that will be used in the **slti** instruction.

I-Format Example (1/2)

 MIPS Instruction: \$21 \$22 -50 Assignment Project Exam Help addi opcode = 8 https://eduassistpro.github.io/ (look up in table) Add WeChat edu_assist_pro rs = 22(register containing operand) rt = 21(target register) immediate = -50(by default, specified in decimal)

I-Format Example (2/2)

• MIPS Instruction:

```
addi $21 $22 -50
Assignment Project Exam Help
Decimal/fie
```

8 2 https://eduassistpro.github.jo/

Binary/field Aepresentat edu_assist_pro

001000 10110 10101 1111111111001110

hexadecimal representation: 22D5FFCE_{hex}

decimal representation: 584449998_{ten}

I-Format Problem (1/3)

Problem:

- Chances are that adding ly swand a Lti will often use immediates small enough to fit in t
- But what if the value i https://eduassistpro.github.io/
 - We need a way to Adea with at edu_assist_mediate in any I-format instruction!

I-Format Problems (2/3)

- Solution to Problem:

 - - Instead, add a new ins https://eduassistpro.github.io/
- New instruction:

register Add WeChat edu_assist_pro

- Stands for Load Upper Immediate
- Takes 16-bit immediate and puts these bits in the upper half (high order half) of the specified register
- Sets lower half word to zero

I-Format Problems (3/3)

Solution to Problem (continued):

```
• Example of how lui helps:

addi $\forall \text{Stressment} \text{Project Exam Help} \\
becomes:

lui $\forall \text{https://eduassistpro.github.io/} \\
ori $\forall \text{$at \text{OxCDC} \\
add $\forall \text{$t0 \text{$xat \text{OxCDC} \\
add $\forall \text{$xat \text{OxCDC} \\
add $\forall \text{$xat \text{$xt \text{$xat \t
```

- Now I-format instructions have only 16 bit immediates
- Assembler can do this for us automatically! (more on pseudoinstructions next lecture)

In conclusion

- Simplifying MIPS: Define instructions to be same size as data word (one word) so that they can use the same memory (compiler can use lw and sw).
 Assignment Project Exam Help
- Machine Language Ins https://eduassistpro.github.fo/

R	opcode	rs Add	WeCha	t edu_ass	hamt	funct
I	opcode	rs	rt	immediate		

 Remember: The computer actually stores programs as a series of these 32-bit numbers.
